EDUCATION

Bachelor of Computing Honours, Minor in Business — *University of Guelph* Sept 2021 - Present

Relevant Courses: Data Structures, C Programming, Object-Oriented Programming, Computer Networks, Microcomputers, Statistics, Operating Systems, Discrete Mathematics, and more.

Achievements: College of Engineering & Physical Sciences Dean's Honours List — (Fall 2021 - Present)

EXPERIENCE

Teaching Assistant (Introduction to Programming) — *University of Guelph* Sept 2024 - Present

- Helping teach important concepts such as **fundamental programming, networks, databases, algorithm design, IoT, computer security, operating systems** and how to think like a programmer.
- Conducting office hours and consultations to aid students in their learning process.
- Exposing new software engineers to the world of computing and problem solving.

Web Developer & Underwriting Intern — *Sovereign Insurance. Co-operators* May 2024 - September 2024

- Worked alongside **BI** and a team of underwriters.
- Developed an insurance premium rater using **Next.js and Node.js**. To be used by underwriters and brokers to generate monthly premium estimations based on a company's revenue, industry, employee count, and more.
- Utilized company databases in **SQL** for backend data and **object-oriented programming** principles for modularity and re-usability.
- Assisted Underwriters with **analyzing data related to the risk** being underwritten for new business by conducting research to procure additional data needed to make determinations on benefits and rates.

IT Analyst — *Computing and Communication Services. Univ. of Guelph* Sept 2023 - April 2024

- Provided technical troubleshooting, **IT information and solutions** to clients.
- Effectively resolved issues relating to **network connectivity** (wifi-secure, eduroam, Ethernet), **Microsoft 365 suite, operating systems (OS), PC hardware, virus/malware defects** and more.
- Enhanced customer experience by categorizing and documenting customer concerns on help articles available on the official support website.

PROJECTS

Cheese Clicker — *Personal React Project* May 2024 - July 2024

- An interactive online clicker game developed from the ground up using **JavaScript** and **HTML/CSS** with **React** and **Tailwind** utilization.
- Developed skills in **web development**, React hooks, audio integration, component-based architecture, local storage, animations, object oriented design and more.

Realistic 8 Ball Pool — *Full Stack* Jan. 2024 - April 2024

- A full stack 8-ball pool simulator with **realistic physics** that allows for a full match to be played between 2 players. Utilizes **Python**, a **C** physics library, **JavaScript**, **HTML/CSS** and **SQL**.
- Efficiently stored the state of tables, players and shots in an SQL database which is accessed and handled by a Python web server.

SKILLS

Languages C/C++, Python, Java, HTML/CSS, JavaScript, R, SQL, Linux/Unix

Frameworks React, Tailwind, junit, Next.js, Node.js

Technology Git, Docker, Visual Studio Code, Figma

Currently Learning Swift, jQuery, Machine Learning
